PREFACE

DEFINITION OF THE FIELD OF CITY PLANNING

The term City Planning is used to signify "the intelligent control and guidance of the physical conformation, growth, and alteration of cities, towns, or considerable parts thereof, considered in their entirety";¹ or, more briefly, the organization of the physical city, town, or district to fit it to its complex use. It includes the planning of towns, suburbs, villages, and any considerable urban, suburban, or even intimately related rural districts. Material other than that embraced under the above definition is included in this outline only when the subject-matter is treated or considered as having a definite relation to the city plan or its elements. For the purposes of this classification, planning includes re-planning, and the two are regarded as virtually synonymous. Current usage sanctions three different meanings for the phrase city plan: first, the form of organization scheme, conception—purely subjective; second, the drawings, graphic expressions of this conception; third, the physical city resulting from the carrying out of this conception, the scheme realized; these two latter uses being strictly objective. We use the phrase in only the first of these senses, the subjective—the scheme or form of organization.

USEFULNESS OF THE CLASSIFICATION

That all the topics here included have been found necessary in order adequately to care for the arrangement of the ideas now current in city planning—whether expressed in literal or graphic language—is an impressive indication of not only the present magnitude of the subject of City Planning itself, but also the volume of thought already on record within this field. So far as we know, this is the first comprehensive, systematic setting forth of the scope and

¹ Professor Frederick Law Olmsted, Chairman of the National Conference on City Planning.

PREFACE

varied character of this field to such a scale. Yet, so clearly have the relations and scopes of the principal divisions here made of the subject now established themselves, and so far have we been dominantly influenced in choosing for main heads and subheads units of area and the objects upon them distinguished by function, that we believe no radical reorganization of this field is ever likely to occur, and that this classification, which has been prepared with unusual care and had already the helpful criticism of many minds representing many parts of the field, can be adopted with unusual assurance as to its usefulness for an indefinite time to come. Certain parts of the classification must, of course, be expanded from time to time as the corresponding parts of the subject develop. The numbering of the scheme allows for this expansion.

The approach to city planning to-day is still from many directions. The number of these directions, will, as time passes, increase rather than diminish; but, from whatever related, contributory, or overlapping field one comes to city planning, one cannot hope to grasp the problem of the city plan as a whole or the true relation of one's special field to it without reference to some such comprehensive and systematic analysis, expressed or implied, as is here presented. Moreover, however the directions of approach and hence the points of view differ, the organization of the modern city for health, efficiency, and beauty — not to say economy — remains essentially the same, and therefore such a comprehensive classification should be useful alike to the municipal official, the business administrator, the civil engineer, the sanitary expert, the transportation engineer, the housing reformer, the architect, and the landscape architect, as well as the representative of any one of various other special services, in proportion as his occupation enters and contributes to the field of city planning; and the index will show him quickly at what points his special material is provided for. Thus, to all who are concerned with city planning the classification aims to be useful either for the classification of collected material, for the indication of relations between special parts of the whole field, or for a comprehensive presentation and systematic analysis of the

PREFACE

subject. In this last way, it is thought that the classification will be particularly useful to students of city planning in colleges and technical schools where the subject is to any extent taught.

There is much in the rapid spread of the city-planning movement to-day that is unintelligent, superficial, injurious to the best interests of those living and working in cities. It is hoped that such a comprehensive view and systematic handling as here given may help in some small measure to a more general rational conception of this vital field. However this may be, it is issued in response to a demand which has been expressed by practising city planners, city administrators, instructors and students, and librarians, as well as by professional men in the related fields already mentioned.

The very newness of city planning as an art, science, and profession renders the even development of a classification scheme impossible. Certain portions must be scarcely more than suggestive, but even here, in calling attention to the dearth of published material in particular sections of the subject, the classification scheme is useful in pointing out special fields of desirable research.

As the joint authorship of this city-planning classification implies, the principle has been recognized that, to be generally useful, any classification intended as this is to cover the arrangement both of ideas and of actual material, must be a compromise between a theoretical organization of the subject and an arrangement guided merely by existing material. If wholly the former, the classification will not be usable in libraries; while if based only on library needs, its services to those actively interested in city planning must be greatly diminished.

PRACTICAL APPLICATION OF THE CLASSIFICATION TO ARRANGEMENT OF EXISTING MATERIAL

The forms of material which might occur in a collection relating to city planning are: published literature, including books, pamphlets, reports, periodical articles, and clippings; graphic material, published or in original form, including maps, plans, drawings, photographs, plates, postcards, and

PREFACE

miscellaneous pictorial matter; manuscript material, including notes and bibliographical references. All these forms of material are represented in the Library of the School of Landscape Architecture at Harvard, for which this City-planning Scheme was originally developed. In fact, the Scheme originated and has been worked out directly in connection with the organization of the extensive and rapidly growing collections on city planning in this Library.

In preparing one outline of the subject to cover material in such diverse forms, it is obvious that certain sections will be developed to provide more particularly for published literature and certain others more particularly for graphic material. In fact on certain topics given in the outline, perhaps nothing has been *written* at all, although there may be many photographs. The development of the scheme, therefore, while considerably in advance of the literature of the subject in parts, is yet proportionate in consideration of the total material covered.

The proportions of the scheme have furthermore been affected by the necessity to represent various points of view as well as various physical entities, and by the desirability of suggesting various possible arrangements. For the same material may often be arranged in a number of different ways to serve different objects, as shown by the following illustration: a lot of postcards representing residential streets in various industrial cities might be classified either in 1675, Residential districts, or 2235, Residential streets, or 5320, Industrial cities, according to the way in which the owner of these cards would wish to consult them. If he had three copies of each, they could be arranged in all three places. Such duplication is seldom possible, and people have to be content with cross-references. Manuscript notes offer much the same possibilities of arrangement as the postcards just given as an illustration, and may be handled with a similar flexibility. The value of the classification for the arrangement of notes is very great to those interested professionally in city planning and constantly collecting data. In connection with the use of the classification for notes, it is suggested that by making a check mark in the printed index to the classification whenever a topic is looked up to find the

PREFACE

number to apply to the particular note in question, the user will have constantly an up-to-date index to the material he has already assembled. The use of the classification for arranging bibliographical references is also important. The authors have had continually in mind the use of this scheme for the arrangement of the extensive City-planning Bibliography in preparation by the School of Landscape Architecture in coöperation with the Library of Congress, of which a Check List appeared in the May, 1912, issue of the magazine "Special Libraries." As stated in the Prefatory Note, and also at the end of the Check List, where a summary tentative outline was offered, the Harvard City-planning Scheme has been officially adopted by the Library of Congress for the classification of titles in the City-planning Bibliography.

THIS CLASSIFICATION IN RELATION TO OTHER CLASSIFICATION SCHEMES

Library of Congress Classification

In looking about for a basis on which to construct a classification scheme for its special Library of Landscape Architecture, including City Planning, for which there was no adequate provision in any existing classification, the School of Landscape Architecture decided that it was wiser to choose one which could be related to some general scheme already worked out, that could care for whatever material in allied fields it should be desirable to have in the Library. Mr. Sidney Kimball, then Assistant in the School, made a study of existing classifications, on the basis of which the School decided to adopt the Library of Congress Classification, because it is comprehensive, generally known through the wide circulation of printed catalogue cards numbered according to it, and adapted in principle to serve as a basis for the arrangement of the special field of the Library. This principle is a combination of logical subdivision with convenient sequence, allowing a maximum of elasticity in development. Its simple sequential system of numbering was found easy to use in the Library, and convenient of application to the outline of the subject without forcing.

PREFACE

In correspondence with Mr. Charles Martel, then Chief Classifier of the Library of Congress, a place was assigned the subjects in the general Library of Congress scheme (in which no adequate provision for Landscape Architecture or City Planning existed) in Class N, Fine Arts. Landscape Architecture and City Planning were erected as independent sub-classes coördinate with and immediately following Architecture, numbered NA. As the sub-class designation NB was already in use, it was necessary to use a three-letter combination which would assume Architecture to be NA(A), Landscape Architecture NAB, and City Planning NAC. Although City Planning is not primarily a fine art its fundamental esthetic aspect and its close connection with the practice of Landscape Architecture and Architecture were considered to justify its position in class N.

If this City-planning Classification is to be used as a part of the general Library of Congress Classification Scheme — as it is used in the Library of the School of Landscape Architecture — only material included under City Planning in its stricter definition will be classed in NAC; all other material will go in the appropriate Library of Congress class, *e. g.*, Land and Housing, HD; Transportation, HE; Architecture, NA(A); Public Health, RA; Roads and Pavements, TE; Building Laws, TH. This City-planning Classification Scheme will however be used by many people technically interested in city planning who wish to use it as a complete basis of arrangement for all the material which they may collect on the whole subject, including affiliated fields. Provision has therefore been made in this Scheme as it now stands for such a use, in connection with material on affiliated fields, with a reference in the more important cases, to the Library of Congress class where a fuller subdivision of the subject may be found. Those who find this Scheme full enough as it is may disregard these references entirely. Those who wish to go further may consult the Library of Congress classes referred to, the indexes in the backs of the "Schedules" containing these classes, and also the alphabetical list of subject headings published by the Library of Congress.

PREFACE

Forthcoming Landscape Architecture Classification

It is of interest to note the relation to this City-planning Scheme of the Landscape Architecture Scheme (NAB) in preparation by Professor Henry V. Hubbard and Theodora Kimball, of which a brief summary and adaptation appeared in the January, 1913, issue of the quarterly "Landscape Architecture." This forthcoming scheme will contain carefully worked-out cross-references to the City-planning Scheme, and each might well contain material not proper to the other according to the point of view; as, for instance, in the case of Parks, which in the City-planning Scheme are treated primarily as unit areas of a city and in the Landscape Architecture Scheme primarily as landscape compositions.

Adaptations to Other Systems of Classification

There appears to be no reason why this outline of the subject of city planning, very much as it stands, should not be used in connection with other systems of classification in general use. For instance, at present the Dewey Decimal Classification contains no special provision for city planning. The New York State Library states that section 710 in that system is the place where a city-planning sub-class might be developed. The decimal system of numbering might be applied to the outline of this City-planning Classification somewhat as follows: .01-.08 *Bibliography through Museums*, .11-.17 *Collected Works through General Special* (or these form headings could be rearranged to conform with general decimal classification practice); .2 *City-planning movement*; .3 *Legislation*; .4 *Methods of technical procedure*; .5 *Study and teaching*; .6 *Composition of city plans*; .7 *Elements of city plans*; .8 *Types of city plans*; .9 *Geographical arrangement*. The subheads would be similarly numbered in decimal fashion so that a paper on, for instance, the economic aspects of city planning, might have for its classification number 710.623; or again an article on suburban station grounds, 710.71333. Of course some adjustments would have to be made, but the authors believe that the outline, as *an outline of the subject*, could stand.

PREFACE

ORGANIZATION OF THIS CLASSIFICATION

Headings

It should be stated that the first series of main headings (see the Summary Outline) through 300, General special, have been selected from those in general use by the Library of Congress. They might be termed "form headings," since they refer particularly to the form in which the material appears, *e. g.*, a Periodical, a Dictionary. The phrase "General special" is used as a heading for material, which, though *general*, is not comprehensive but deals with some *special* phase of the general topic, *e. g.*, under the heading Conduits. Wires, the topic 2857, Relation to street maintenance, appears under General special. This heading has been used consistently throughout this scheme, sometimes with subheads, often alone, with a gap in the numbering to permit the insertion of future subheads if desired.

The second series of headings beginning with 500, City-planning movement, constitute a systematic subdivision of the field, adjusted to meet the demands of classifying material which, as physical objects, can stand in the files only in one place. Aspectual subdivisions, and provision for arrangement from different points of view, need not encumber the simplicity of the outline for use with graphic material representing objects alone. As has been stated earlier in this introduction, certain headings apply more to literature and certain others more to pictorial matter. Use of the topics will soon reveal this distinction. Certain subheads have been provided uniformly under all the principal elements; beyond this, an exact uniformity of phrase under all subheads has not been sought: it has seemed better to use whatever phrases were most expressive in the given instance.

However, as far as possible, corresponding parts of the outline itself have been constructed as uniformly as possible, to offer mnemonic advantage, for instance, under Vegetation, Special uses (4870), the topics have been arranged in the same order as the large headings under Elements.

In order to present the subject clearly, each major sub-

PREFACE

division of the outline is developed to a certain proportion, even if the subheads are given only as cross-references, *e. g.*, Squares, 4400. In minor cases, however, only typical topics have been given under a heading, often in order to make clear the kind of material which should be classified there. These type subheads have been generally chosen because they represented actual existing material, *e. g.*, 1246, to cover a couple of recent magazine articles on the influence of aviation on the planning for total effect of the city as seen from above. Gaps have been left in the numbering for the insertion of similar subheads.

In arranging a series of subheads, a coherent sequence has been preferred to an alphabetic arrangement, on account of the advantage gained for pictorial material, as shown by section 3820+, Minor structures. In general, the sequence of the actual material as arranged by this scheme has been carefully considered.

Numbering

The numbering of the Scheme requires some explanation. The system is that employed by the Library of Congress, a sequence of simple cardinal numbers, with gaps left between the numbers assigned the topics given, in order to allow for the insertion of new topics. Further expansion may be provided for by the use of decimals, as in Library of Congress Class HD, section 9000+. The numbering of the City-planning Scheme has been done loosely, since the subject is growing so rapidly, and may develop at an unexpected point or in an unexpected way. Several hundred numbers have been left open to provide for such emergency. In classifying material in a library using the Library of Congress Classification, the numbers of the outline would be preceded by NAC, the general class designation for city planning. For a collection wholly on city planning and using only this scheme, NAC need not be used, since the numerical designation is sufficient. In a collection using the forthcoming Landscape Architecture Scheme (NAB) and this scheme (NAC), B might be used for Landscape Architecture and C for City Planning, or whatever mnemonic device the owner preferred.

PREFACE

Indentation

It has not been possible to express exact coördination and subordination of heads and subheads by the indentation. Often importance or bulk of material has pulled a logically subordinate topic into a more important place. Furthermore, indentation by exact logical arrangement would make many of the headings too far to the right of the page for convenient printing; and the insertion of headings to show theoretical relations, where not necessary for clearness, would render the outline clumsy for use in classifying material.

Explanatory Notes

Notes have been given throughout the scheme explaining the meaning of a heading and what material should be classified under it, wherever the authors felt these points were not self-evident.

Cross-references

Cross-references have been freely made between headings containing related material and further to call attention to headings under which the same material might be arranged from different points of view. In making these cross-references, where there has been no doubt as to the connection, the number referred to has alone been given without the corresponding heading. In doubtful cases, the heading referred to has been given in addition to the numerical reference. The authors do not feel that it was advisable to give referred-to headings except in doubtful cases, on account of the great increase in bulk which the headings for the very large number of cross-references would have caused. In making the numerical cross-reference to a topic, the initial number only has been used, followed by a plus sign (*e. g.*, 4300+) if the topic occupies more than one number. Throughout the scheme the numbers and topics given in curves followed by a reference to some other number show where material might be classified if desired for some special purpose, but where the authors do not think it as well placed from a general point of view as under the number referred to. The Index may be used to supplement cross-references in the text.

PREFACE

Summary Outline

Besides the full Classification Scheme, the authors have included a Summary Outline, consisting of the main heads and subheads. This Summary serves to show the general construction of the Scheme, and also as a briefer basis for arrangement of material where there is only a small collection, or a collection developed at some one point, for which section alone the fuller scheme would be necessary. The topics given in the Summary Outline are printed in capitals in the full scheme, both for emphasis and to facilitate reference from the Summary to the Scheme itself.

Geographical Table

The Geographical Table given with this Classification was taken substantially from that included in Library of Congress Class N, called Table II. It is here numbered to use for the section City Planning, by special countries and cities. The same numbers (1-184) in the same relation, or these numbers as decimals, can be used at other points in the scheme where a geographical subdivision is desired. Appended to the Geographical Table is a careful explanation of the possible subarrangement of material under individual countries and cities.

Index

The alphabetic subject Index to this Classification has been made exceptionally full. The text of the Scheme has been indexed to bring out catch-words in many cases, as well as subjects, for the convenience of the person who remembers a word, phrase, or special form of heading and wishes to find it again. As few as possible "see" references have been made in the index: the numerical reference has been given for each significant word of a phrase, instead of a cross-reference (*e. g.*, Street name-plates, Name-plates, Street), unless there are subdivisions under the topic, in which case a "see" reference has had to be made to avoid excessive duplication in printing. The "see" references in the Index consist mostly of phrases not used in the Classification which might possibly be looked for in the index and under which reference is given to the sections in this Scheme relating to

PREFACE

the subject. A word or phrase in curves, *e. g.*, Soil (Data), is given in many cases after an entry in the index to explain its bearing. It has been the intention of the authors that the Index shall be of the greatest possible service to users of the Classification, and all the means which have presented themselves have been employed to accomplish this object.

PUBLICATION OF PRELIMINARY OUTLINE

In May, 1913, when the classification was approaching completion, a Preliminary Outline was issued (Printed as Manuscript), in order to invite suggestion and criticism, before the full Scheme should be fixed in final form. This Outline contained merely the main headings, together with some indication of the material included thereunder, without numbers or index. The Outline was circulated widely both among librarians and among those professionally interested in the subject of City Planning, particularly members of the National Conference on City Planning, whose technical comment was awaited with interest. Meantime the authors had themselves been developing the fuller scheme to a point considerably beyond that represented by the published Preliminary Outline. Among the large number of acknowledgments and appreciations received from those to whom copies of the Outline were sent, very few contained constructive criticisms. Those suggestions and criticisms which were made were carefully considered and in every case acted upon.

ACKNOWLEDGMENTS

Professor Frederick Law Olmsted, Chairman of the National Conference on City Planning, who had been interested in the Scheme from its beginning and who had already given constructive suggestions, considered the Preliminary Outline and suggested valuable improvements, particularly in the sections relating to Data for City Planning, which now stand practically in accordance with the subdivisions he made in his address on the subject before the City-planning Conference, May, 1913. Mr. Flavel Shurtleff, Secretary of the Conference, who is making a special study of the legal aspects of city planning, made valuable suggestions for the

PREFACE

section Legislation while the Outline was in manuscript. Professor Charles W. Killam of the School of Architecture at Harvard is responsible for the classification under Types of Building Construction as it now appears. Among others, Mr. John Nolen of Cambridge, Professor James Ford of the Department of Social Ethics at Harvard, and Professors Brix and Genzmer of the K. Technische Hochschule, Berlin, have made suggestive comments. Mr. H. H. B. Meyer, Chief Bibliographer of the Library of Congress, whose connection with the forthcoming City-planning Bibliography gives him a particular interest in the Scheme, and who had approved it in its early stages for the arrangement of the Bibliography, also made several very valuable suggestions, which were incorporated.

Besides grateful acknowledgment to those already mentioned, the authors desire to make special acknowledgment to the following persons: to Mr. Sidney Fiske Kimball, then Assistant in the School of Landscape Architecture at Harvard University and now Instructor in Architecture at the University of Michigan, for the use of his draft for a tentative outline of classification for use in the School of Landscape Architecture Library, which made a most valuable basis for further development; to Mr. Charles Martel, then Chief Classifier and now Chief of the Catalogue Division of the Library of Congress, for his consideration of the scheme, in its early stages, in personal conference in March, 1912, and for his interpretation of the principles of the Library of Congress Classification as applying to this field; to Professor Henry V. Hubbard, of the School of Landscape Architecture at Harvard University for constructive thought and unstinted assistance in the development of the scheme throughout the undertaking.

260 Partial works,

 Treating two or more subdivisions of the general subject.

 Essays, addresses, lectures.

 Cf. 542.

265 Collective.

 Miscellaneous.

270 Single.

 When general; specific go with subject.

(280) General collections of material in special forms.

 Classify here only material which it is desired to keep together as a collection rather than to distribute by subject.

282 Atlases and general collections of plans.

284 Portfolios and general collections of paintings, drawings, sketches, etc.

286 Albums and general collections of photographs, prints, plates, postcards, etc.

288 General collections of lantern slides.

290 General collections of clippings, excerpts, etc.

292 General collections of manuscripts, notes, etc.

294 General collections of books and pamphlets.

 Chosen as typical; e. g. "ten books on city planning for an office library."

CITY PLANNING

GENERAL SPECIAL.

- 300 Name. Use of terms.
City planning or Town planning, Civic design, Municipal improvement, Civic improvement, Civic betterment.
- 305 Purpose, utility.
- 310 Field, scope. Relation to other arts, sciences, and professions. *Cf. 815, where relation of practitioners should go*
City planning as an art, science, or profession.
- 320 General.
- 322 Requirements.
- 324 Opportunities.

CITY-PLANNING MOVEMENT.

- Municipal improvement, Civic betterment movement, etc.
- 500 General.
- 505 General special.
Purposes, activities, progress, etc.

ORGANIZATION.

- 510 General.
Agencies, organizations.
Cf. (1542).
- 512 General.
- 513 Societies.
- 515 Chambers of commerce, boards of trade.
- 517 Clubs, city clubs, women's clubs, etc. *juvenile leagues, etc.*
- ~~518~~ *Other*
520 Resources.
- 525 Campaigns, organization of work, etc.

EDUCATION OF PUBLIC.

- Awakening of interest, public advertising, publicity.
- 540 General.
- 542 Lectures.
- 543 *Cf. 265+*
Moving pictures
- 544 Publications, propaganda.
- 546 Demonstrations, exhibitions.
- Cf. (50) +, 940.*
Pageants
- 547 Teaching in public schools. *or special non-tech schools*
- 548 *e.g. Army Educ. Commn.*
Cf. 900+.

ACTION BY COMMUNITY.

- 565 Direct improvement of conditions.
- 569 Support of existing official agencies.

CITY PLANNING

CITY-PLANNING MOVEMENT (*continued*).

ACTION BY COMMUNITY (*continued*).

- 571 Unofficial employment of experts.
Cf. 875, 1540.
- 573 Initiating and securing of legislation.
Cf. 700+.

SPECIAL ASPECTS.

- 580 Village improvement movement.
Cf. 5605.
- 582 Garden city movement.
Cf. 5350.
- 584 Rural improvement movement.
- 586 Women in city planning movement.
- (600) (Special places.) See 6800+, City planning by
special countries and cities.

However, if desirable, a shorter geographical table, such as
Library of Congress Table I of Class N, may be inserted here.

LEGISLATION.

Cf. 573. If a special collection is being made in this field,
under each subdivision given here, local legislation might be
arranged alphabetically by country or city. See also note
under 760+, Regulative legislation

- | | | |
|-----|-----------|---|
| 700 | General. | 702 In relation to public property x 722+ |
| | CREATIVE. | 704 " " " private " x 760 |

- 705 General.

- 707 General acts.

e. g. British Housing and Town Planning &c. Act, 1909.

Creation or empowering of administrative agents.

Cf. 1520+.

- 712 General.

- 714 City-planning departments, commissions, etc.
Cf. 1535.

- 716 Other.

Creation of public properties, rights, etc.

- 720 General.

- 722 Acquisition of land and other privately
owned property. Eminent domain.
Condemnation of land, taking of land, etc.

*Assessment laws
cf. 1520, which
should attract*

- 724 Excess condemnation.

- 728 Redistribution of land. "Lex Adickes." cf. 3040

- 735 Creation of easements, rights-of-way, etc.

- 740 Acquisition of privately-owned utilities.

CITY PLANNING

LEGISLATION (*continued*).

REGULATIVE.

- 760 General.
(765) (Special.) For regulative legislation relating to special subjects (*e. g.* Districts, Streets, Buildings, Parks) see the special subjects, subhead Legislation. See Index, under Legislation.

SPECIAL COUNTRIES.

Put here, if desirable, collected legislation of special countries or localities.

- 775 United States.
780 Europe.
785 Other.

METHODS OF TECHNICAL PROCEDURE. PROFESSIONAL PRACTICE.

Cf. subhead Special professional considerations under Elements (*e. g.* Bridges). See Index, under Professional considerations.

- 800 General.
805 General special.
810 Legislation. Regulation.

Professional examinations & registration → 812

COLLECTION AND PRESENTATION OF DATA.

MAKING OF SURVEYS.

In general; local works go in 6800+. Cf. Data 1300+. Put here *Methods* of collecting and presenting data, etc. Discussions or general collections of data go in 1300+.

- 815 General.
Special classes.
820 Topographic, etc.
Cf. 1320+.
822 Social, etc.
Cf. 1400+.
824 Legal and administrative.
Cf. 1500+.
826 Economic and financial.
Cf. 1545+.
Forms of presentation of data.
830 General.

* Municipal technical procedure. *e. g.* as in England under the Act of 1909. Use 812 as place for "How to proceed" etc., "Suggestions to board" etc. etc., allowing it to cover such things as public hearings etc. required by law before carrying out projects.

CITY PLANNING

METHODS OF TECHNICAL PROCEDURE. PROFESSIONAL PRACTICE (*continued*).

COLLECTION AND PRESENTATION OF DATA.

MAKING OF SURVEYS.

Forms of presentation of data (*continued*).

832 Reports, tabulations, compilations, censuses,

Cf. 832.

854 Drawings, plans, etc.

Cf. 834.

856 Models.

Cf. 836.

858 Estimates.

859 *Contracts and specifications*

860 DIRECTION OR SUPERVISION OF CONSTRUCTION

AND MAINTENANCE.

Cf. subhead Construction and maintenance under the
individual Elements, (e. g. Streets, Parks). See Index.

875 CONSULTATION. COÖPERATION ^{*and functions*} OF EXPERTS. ~ cf. 310

Cf. 571, 1540.

878 *Charges*

880 COMPETITIONS.

Material relating to special competitions may be classified
by the subject of the competition, or grouped here, according
to convenience.

*If individual local competitions are grouped here
an alph. arr. by name of place is convenient,
following non-local (or ideal) competitions, arr. alph.
by authority holding competition.*

CITY PLANNING

STUDY AND TEACHING.

Cf. 548. This section 900+ is for professional study and teaching.

900 General.

905 General special.

SUBJECT MATTER.

910 General.

912 Theory of city planning.

914 Practice in design, economic and esthetic.

Cf. 840+, 1200.

916 Elements of city plans. Materials.

Cf. 1900+.

918 Construction and maintenance.

920 Special contributory subjects.

METHODS.

930 General.

935 Courses of study in universities, colleges, technical schools.

940 Study in libraries, collections, and exhibitions.

Cf. (50)+, 546.

945 Observation and travel.

947 City-planning study tours.

950 Experience in offices of competent practitioners.

SPECIAL COUNTRIES.

960 United States.

962 England.

964 France.

966 Germany.

978 Other.

SPECIAL SCHOOLS.

Including catalogues and bulletins. Note: word "school" is used in the sense of institution not in the sense, *e. g.* "school of Sitte."

980 United States.

982 England.

984 France.

986 Germany.

998 Other.

CITY PLANNING

COMPOSITION OF CITY PLANS. PLANNING. REPLAN- NING.

AGRICULTURAL DISTRICTS, agricultural belts, forest belts.

Cf. 1380+, (3244).

- 1715 General.
- 1720 Agricultural belts.
- 1723 Market-garden areas.
- 1724 Allotment gardens.
- (1725) (Forest belts.) See 4160, Forest reservations.

RECREATION AREAS.

Open rings. "Belts of green"

Cf. (3245), 4000+.

- 1730 General. Distribution. *Recreation centers*
- 1731 General special.
- 1733 Relation to transportation facilities.

BOUNDARY AREAS. Boundaries.

Cf. 1715+, Agricultural and forest belts.

- 1745 General.
- 1748 Approaches and entrances.
Cf. 2750+, Terminal facilities.
- 1750 City boundaries.
Cf. 3815, City walls.

ORGANIZATION AND SUBDIVISION OF CITY AREA INTO

STREETS AND BLOCKS. Land subdivision,

in the larger sense. *Street systems. Platting.*

Cf. 3000+.

- 1800 General.
- 1805 General special. *Relation to topography.*
- 1808 (*Regulation. Street system. Cf. 2070. Platting regulations*)
- 1810 LOCATION OF MAIN THOROUGHFARES.
Cf. 2170+.
- 1812 Determining centers, ~~goals~~, foci. (*Local centers, see 1627*)
- 1814 Determining connecting routes.

CITY PLANNING

stoops, marquees, projections, etc. *Side walk obstruct*
- 2161 Arcades, colonnaded streets, covered street-
ways, ^{and footways} galleries.
- 2163 Relation to height of buildings.
Cf. 3083, 3480+.

Thoroughfares. Highways. "Traffic streets."

Cf. 1810+.

Including interurban highways.

- 2170 General.
- 2175 General special.
- 2180 Special forms.
- 2182 Radial.
- 2183 Circumferential, peripheral. Ringstrassen.
- 2184 Diagonal.
- 2188 Other.
- Special uses.
- For business traffic.
Cf. 4891.
- 2195 General.
- 2197 Traffic squares. Roundpoints.
Cf. (4420).
- 2199 Cabstands.
- 2201 One-way streets.
- For pleasure traffic. Drives.
Cf. (4196), 4893.
- 2205 General.
- 2207 Formal. Boulevards, etc.
- 2209 Informal. Parkways, etc.
- 2211 Concourses.
- 2212 ~~Park roads~~
- 2213 Bridle paths.
- 2214 Bicycle paths.

Local streets.

Cf. 1820.

- 2220 General.

CITY PLANNING

ELEMENTS OF CITY PLANS (*continued*).

CHANNELS OF TRANSPORTATION.

STREETS, ROADS. FOOTWAYS.

Local streets (*continued*).

- 2225 General special.
Special uses.
- 2230 For business. As frontage for business
buildings, etc.
Cf. 1630+, 4891.
- 2233 Business squares.
2234 ~~Market squares~~ (taken from 4425)
For residence. Residential streets.
Cf. 1675+, 4892.
- 2235 General.
- 2236 Urban.
- 2237 Suburban.
- 2238 "Places," residential squares. Cf. (4445) Courts
2240 For play-grounds as playgrounds
Special forms.
- 2242 Alleys.
Cf. 3181.
- 2244 Private ways.
Footways.
- 2250 General.
- 2252 Sidewalks. Walks.
- 2254 Independent footways.
- 2256 Steps, ramps, etc.
- 2258 Promenades, malls, etc.
Cf. 4197.
- (2261) (Covered footways) See 2161
2262 Footbridges and tunnels. Underground pedestrian footways
Cf. 3740+.
- Highway bridges and tunnels.
Cf. 3740+
- 2270 General.
- 2272 Special purposes, to cross water, railroads,
highways, etc. 15
- 2276 Approaches.
Cf. 2405.
- 2278 Draws.
- 2282 Elevators, lifts, etc.
Cf. 2526.

CITY PLANNING

CITY PLANNING, BY SPECIAL COUNTRIES AND CITIES

6984

arranged geographically. See Geographical table, and Subarrangement of material under individual countries and cities, following.

GEOGRAPHICAL TABLE.

This table is substantially that given at the end of Class N, of the Library of Congress Classification, there designated as Table II. It is here numbered ready to use in connection with this City Planning Scheme. It will be noted that the gap left after the number assigned to a country (*e. g.* Canada, 6829, Mexico, 6831) can be used for a separate number assigned to works on individual cities of that country if the user so desires. In that case, for example, works on City Planning in Canada would be numbered 6829, while a work on the Plan of Calgary would be numbered 6830 Cal, (*Cal* being the abbreviation formed from the first few letters of the city name). The School of Landscape Architecture uses this method, which for a very small collection might not be worth while.

It was considered best to publish a full geographical table, especially to provide for the arrangement of descriptive material, photographs, and postcards which might be assembled as data from all over the world.

COUNTRY SUBDIVISIONS.

6801 America.

6803 North America.

6805 United States.

SUBARRANGEMENT OF MATERIAL UNDER INDIVIDUAL COUNTRIES AND CITIES.

It will very often be necessary to subdivide the material accumulated for individual cities. The simplest method of doing this is to use the number for the city followed by the numbers for the topics as given in the general classification scheme. For example, a man living in Chicago has besides the general city-plan reports for Chicago a large collection of clippings and excerpts relating to Chicago. The designation of Chicago in his files is 6827 Chi (see explanation at beginning of geographical table). His reports, which he arranges chronologically, are numbered 6827 Chi 1909, 6827 Chi 1911, 6827 Chi 1912. By taking the letter A to follow 6827 Chi he can designate that detailed material is to be kept separate from the general chronological arrangement. He then looks over the Summary Outline of the Classification, noting the numbers of the topics on which he has material, and proceeds to designate his clippings as follows, *e. g.* those on Business districts, $\frac{6827 \text{ Chi}}{A 1630}$; those on Streets, $\frac{6827 \text{ Chi}}{A 2050}$; those on Playgrounds, $\frac{6827 \text{ Chi}}{A 4300}$; and so on. The alternative method to the one just described would be to boil down and renumber with letters or small numbers the Summary Outline and then to use these designations in the way just described. This could be done by each individual, especially if he wishes to have only a small number of subdivisions.

Although the numbers resulting from the first method are somewhat long, this disadvantage is far outweighed by the following advantages: a man has only one outline to remember, and only one set of numbers; since the subdivisinal numbers under an individual city are the same as the numbers on the general subject, there is an automatic cross-reference both ways — a person wanting everything on play-

GEOGRAPHICAL TABLE

grounds knows he must look under 4300 both in the general arrangement and under such cities as have been subdivided, while a person studying Boston's playgrounds (6827 Bost A 4300), and wishing to compare these data with general data, can look instantly in 4300; furthermore, material which might appear on any minute topic relating to a given city can be cared for immediately by specific number taken from the fuller scheme.

In case it is desirable to separate material relating to sections of a city from that relating to the city as a whole, this might be placed last and perhaps designated B, so that after general reports and material on special subjects designated *e. g.* 6827 Bost 1912, $\frac{6827 \text{ Bost}}{A 4300}$, there would be *e. g.* $\frac{6827 \text{ Bost}}{B. \text{ Rox}}$, for the Roxbury section of Boston.

The above suggestions serve to indicate the possible treatment of a large bulk of local material. The particular purpose for which the material is to be used will of course determine the amount and character of subdivision that will be worth while.

Study and teaching, 912.

Thoroughfares, 2170-2211.

Location, 1810-1814.

Through lines (Railroad), 2502.

Tile and brick (Buildings), 3523, 3539

Topographic aspects.

Blocks and lots, 3011.

Channels of transportation, 2011.

Open spaces, 4011.

Topographic data, Collection and presentation, 820.

Topography (Data), 1340-1376.

(Blocks), 3145.

(Blocks and lots), 3065.

(Lots), 3293-3295.

(Streets), 2110.

Types of city plans distinguished by, 5250-5290.

Tours, City-planning study, 947.

Towers, 3502.

Towers, Water, 3568.

Town planning (Term), 300.

Tracks (Street-railway), 2384.

Trade, Boards of, 515.

Traffic (In general), *see* Channels of transportation, 2000-2930.

Congestion of, 2057.

Influence on street-form, etc., 2057.

Intersection of lines of, 2136.

Open spaces as obstructions to, 4015.

Traffic, Motor, Influence on streets, 2058.

Traffic, Surface, Obstruction by street-railway structures, 2357.

Traffic, Through, Relation to residential districts, 1682, 4679

Traffic censuses, 2076.1

Traffic regulation, 2070, 2076.2

Traffic squares, 2197, (4420).

"Traffic streets," 2170-2211.

Train yards, 2490.

Transfer stations (Street-railway), 2410.

Transportation (Data), 1440.

Buildings in connection with, 3605.

Channels of, 2000-2930.

Facilities.

Relation of business and industrial districts to, 1633.

Relation of recreation areas to, 1733.

Relation to growth of suburbs, 1687.

Influence on streets of changes in means of, 2058.

Transportation, Aerial, Terminals, 2379, 2479, 2820-2829

Transportation, Local, Relation of terminal facilities to, 2807.

Transportation, Passenger, 2378, 2478, 2806-2807.

Treatises, Comprehensive, 250.

Tree guards, 4846.

Trees, 4860.

(Street planting), 4885.

Trolley poles and wires, 2386.

Tubes (Rapid transit, etc.), 2400.

Tunnels.

For foot passengers, 2262.

Freight, 2522.

Highway, 2270-2284.

Railroad, 2515-2529.

Rapid transit, 2400.

Turf, 4863.

Turf strips (Street planting), 4888.

Two-story streets, 2119.

Type, Historic, Truth of city plans to, 1272.

Types of city plans, 5200-5690.

U

Unbuilt-over area.
(Blocks), 3177.

Blocks and lots, 3087-3091.

Lots, 3327.

Underground cables, 2386.

Underground *footways (pedestrian)* 2262
gas-leaks (Injury to
vegetation), 4858.

Underground railways, 2400.

Underground water, Flow of (Data), 1386.

Undeveloped land, Control, 1609.

Union stations, 2483.

Universities, Study and teaching of, city planning in, 935.

University cities (Types of plans) 5325.
